

Linda Bell presents BELL TECH 'DEAF Technologies' to take Top Prize!

Flint, MI 'Ferris Wheel 100k Ideas' New Business PITCH Contest! Sponsored by 100k Ideas and the Mott Foundation, **<http://thepitch4k.com/>

These capabilities are the beginning steps toward a future where Society increases opportunities to...

- *talk to a deaf person and have them 'hear' thru 'Visual' output technology in real conversation mode
- *enable "Hearing" Educators and Teachers how to "Teach" Deaf students w/o Manual Sign Training
- *educate the Deaf/HoH, young & old, incl Free Age Appropriate Training to accommodate their needs
- *increase early childhood social interaction & communication with peers creating self-determination
- *remove societal stigma about deaf persons which increases self-esteem and feelings of Inclusion
- *provide deaf/HoH people equivalent quality Healthcare, Educational, Social & Employment options
- *foster better interactions & education with Deaf support systems & families to accommodate issues
- *reduce personal & government expenses by reducing Deaf/HoH related Health & Psychological issues
- *provide low cost technology to allow fluid two way 'group' conversations with Deaf & Hearing people
- *identify the individual 'Speaker' in Family and Social Group communications for appropriate responses

In the future, deaf people will walk among us fluidly, interface easily and become major contributors to both industry and social environments because the current BELL TECH concepts and other future technologies will evolve, and become adopted very quickly, once the unique capabilities have been proven in our real Society environments.

The BELL TECH conversational interface technologies will permeate all phases of society, from current educational systems, Healthcare arenas and a broad cross section of industries savvy enough to see a new source for educated, capable and dedicated employees. But the greatest advantage is the third WIN, where people who were isolated will become engaged, and an entire Deaf/HoH Community who doubted their value to society will become proactive contributors to our All Inclusive Future Society, the Win-Win-Win!

BELL TECH Communications has recently released initial funding requirements to the local investment community and actively seeks partners who see the future as we do, open and inclusive, and available to all who need the help, and the response is extremely positive in every way, allowing us to plan for a Beta/Pilot product program approximately 4th quarter of 2020, and full product release by the end of Jan 2021, if all goes as planned.

Help change our world into an inclusive collective where everyone has an opportunity to be heard!
